

| | | | |
|---|---|---|---|
| 1 | 2 | 3 | 4 |
| 0 | 1 | 2 | 3 |

temp = 1

for (i = 0; i < n; i++)

{
 prod[i] = temp
 temp = arr[i]

temp has min value until i-1

arr

| | | | |
|---|---|---|---|
| 1 | 2 | 3 | 4 |
| 0 | 1 | 2 | 3 |

i = 0

| | | | |
|---|---|---|---|
| 1 | 1 | 1 | 1 |
|---|---|---|---|

prod[0] = 1

temp = temp * 1 = 1 * 1 = 1

i = 1) prod[1] = temp = 1
 temp = 1 * arr[1] = 1 * 2 = 2

| | | | |
|---|---|---|---|
| 1 | 1 | 1 | 1 |
| 0 | 1 | 2 | 3 |

i = 2) prod[2] = temp = 2
 temp = temp * arr[2] = 2 * 3 = 6

| | | | |
|---|---|---|---|
| 1 | 1 | 2 | 1 |
|---|---|---|---|

i = 3

prod[3] = temp = 6
 temp = temp * arr[3] = 6 * 4 = 24

| input | prod |
|---------------|---------------|
| 1 2 3 4 | 1 1 2 6 |

temp[i-1] is in prod[i]

temp = 1

for (i = n-1; i >= 0; i--)

| prod |
|---------------|
| 1 1 2 6 |
| 0 1 2 3 |

| arr |
|---------------|
| 1 2 3 4 |
| 0 1 2 3 |

$$prod[i] = prod[i] * temp$$

$$temp = temp * arr[i]$$

i = 3)

$$prod[3] = prod[3] * 1$$

$$= 6 * 1 = 6$$

$$temp = 1 * 4 = 4$$

| | | | | |
|---|---|---|---|---|
| 1 | 1 | 1 | 2 | 6 |
|---|---|---|---|---|

i = 2)

$$prod[2] = prod[2] * 4$$

$$= 2 * 4$$

$$= 8$$

| | | | |
|---|---|---|---|
| 1 | 1 | 8 | 6 |
|---|---|---|---|

$$temp = temp * arr[2]$$

$$= 4 * 3 = 12$$

i = 1)

$$prod[1] = prod[1] * temp$$

$$= 1 * 12 = 12$$

~~$$temp = 12 * arr[1]$$~~

$$= 12 * 2 = 24$$

| | | | |
|---|----|---|---|
| 1 | 12 | 8 | 6 |
|---|----|---|---|

i = 0)

$$prod[0] = prod[0] * temp$$

$$= 1 * 24 = 24$$

$\begin{aligned} &= 24 \\ \text{temp} &= 24 \times \text{arr}[0] \\ &= 24 \times 1 \\ &= 24 \end{aligned}$

| | | | |
|----|----|---|---|
| 24 | 12 | 8 | 6 |
|----|----|---|---|

Summary

On the first pass, temp grows towards the right

| 0 | 1 | 2 | 3 | 4 |
|---|---------|---------|---------|---------|
| 2 | temp[0] | temp[1] | temp[2] | temp[3] |
| | prod[i] | | | |

✓ Thus at any point of time,
 $\text{prod}[i] = \text{temp}[i-1]$

↪ temp grows
 by multiplying
 numbers

Hence, while coming back to calculate $prod[i]$ we need a similar temp growing from the opposite direction.

$$prod[i] = temp_previous[i-1] * arr[i+1]$$

$\Rightarrow prod[i] = prod[i] * temp$
 $temp = temp * arr[i]$

this is growth
